## Animal Signs - Woodpeckers & the Life Cycle of Trees

There are many kinds of woodpeckers in North America. Though they all look quite different they have a few features in common - a strong, sharply pointed bill for digging into trees after insects, a stiff tail, and a wing pumping flight where they pull their wings in after each flap. From the pictures below see if you can learn to identify some of the common woodpeckers in North America. You can look them up at [www.exploringnature.org](http://www.exploringnature.org). Peck away at them!
